

Fogless International AB

Since 1989, Fogless® has been developing, manufacturing and distributing the SPIRO® Speaking Valve for tracheostomy users, as well as HME valves.

We are now also producing and marketing the unique oval tube products developed by Prof. Carl-Eric Lindholm. The oval tracheostomy cannulae (OctaTrach) and the anatomically shaped oval orotracheal tube (LAO Tube) will reduce recovery times and provide for longer intubations, which provides real cost savings.

New products on the way in 2012 include a Speaking Valve for ventilated patients!

We are also active in the development of new products in the area of endotracheal and laryngectomy devices.

Vision

"A better life with Fogless®"

Mission Statement

Fogless® develops and produces medical devices to enhance the quality of life for people with respiratory problems.

Business strategy

Fogless® introduces medical devices in a responsible way in co-operation with qualified partners with a good reputation on the specific market. Today we are represented worldwide in more than 30 countries. Fogless® is certified according to SS-EN ISO 9001:2008 and SS-EN ISO 13485:2003.

Key projects/products

One of Fogless's® most interesting products is its own developed and branded product SPIRO®. Fogless® manufactures the SPIRO® Speaking Valve and HME for tracheostomy users at its own production facilities in Sweden. SPIRO® has unique patented features, such as a filter which cleans the inhalation air and at the same time provides an excellent function. It is silent with very low resistance as well as light weight. This is only a few of the major features of SPIRO®.

All these features combined with more than 20 years of research and experience has just one focus – to give the user a better day!
